

# Tools for Detecting Hard-to-Find Leaks

**M**ost HVAC technicians agree that when it comes to leak detection, the toughest challenge is finding small leaks in tight, hard-to-reach places. Two ultraviolet flashlights from Streamlight Inc., the Stylus® UV and the Twin-Task® 3C UV, are designed to solve this problem while improving overall leak detection in heating, A/C and refrigeration units.

## Stylus UV & Twin-Task 3C UV

The compact, ultra-slim Stylus UV penlight lets technicians spot even the tiniest leaks inside units that other flashlights simply can't reach, and it fits in your pocket. The larger Twin-Task 3C UV is both a traditional incandescent flashlight and an ultraviolet light that offers nearly seamless transition between UV detection and all-purpose flashlight applications. Both flashlights, featuring premium true ultraviolet LEDs in the 365 to 390-nanometer range, are comparable to UV lights with filters for illuminating fluorescent dyes.

The Stylus® UV features a 365nm high-intensity ultraviolet LED that lasts 100,000 hours. It measures 6.6 inches and weighs 1.1 ounces.

The compact (9" long) and light weight (16 ounces) Twin-Task® 3C UV is available in two models: Titanium with six 390nm UV LEDs; Black with three 375nm LEDs and three 390nm LEDs, which provide two intensity levels of ultraviolet light.

For the HVAC contractor, the titanium TT-3C UV model will fluoresce the majority of dyes used for leak detection. The black TT-3C UV model illuminates a broader range of dyes and is used primarily in law enforcement.

### Is ultraviolet light safe?

The wavelength used in Streamlight's UV lights, known as long wave ultraviolet light, is completely safe under normal use. In extremely high amounts, however, it can be harmful when exposed directly to the eye or the skin.

The Stylus UV and TT-3C UV come with Streamlight's limited lifetime warranty. For more information about Streamlight's high performance lighting equipment for professionals – including our cost-saving line of rechargeable products -- please visit us online:

**TOOLS. NOT TOYS.**

# Stylus® UV

ULTRA VIOLET PEN LIGHT

# Twin-Task® 3C UV

COMBINATION XENON/UV LED FLASHLIGHT

## Ultra-sensitive and ultra-effective ultraviolet pen light fits in your pocket!

- Black aluminum case
- 365 NM Ultraviolet LED
- Powered by 3 “AAAA” alkaline batteries (included)
- Runs 60 hours
- Momentary blink and constant “on” modes
- Serialized for easy identification
- Pocket clip for easy access; glare guard protector
- 6.21”; 1.1 oz.

## Ultraviolet LEDs and xenon bulb combination offers the convenience of 2 flashlights in one!

- Features xenon bulb; plus 6 ultraviolet LEDs
- Xenon bulb delivers 57 lumens
- Matte black model (3) 365 and (3) 390 NM LEDs
- Titanium model features (6) 390 NM LEDs
- 5 hours run time (xenon); 160 hours (3 LEDs); 100 hours (6 LEDs)
- Micro-faceted reflector for smooth focus
- Powered by 3 “C” alkaline batteries
- O-Ring sealed for water resistance
- Heavy duty drop-tested construction; anodized machined aluminum housing
- 9.02”; 16 oz.
